PROFESSIONAL SUMMARY

Results-driven 3rd-year B.Tech CSE student at ABES Engineering College (NAAC A-Grade, AKTU-affiliated) with proven experience building production-grade backend systems in Go and Python. Passionate about Data Structures & Algorithms, contributed to 3 open-source repositories, and built projects spanning cybersecurity honeypots, AI-powered trading, and full-stack platforms. Seeking a backend engineering internship to ship scalable, secure solutions from day one.

TECHNICAL SKILLS

Languages: Python, Go (Golang), C, SQL, Bash, JavaScript

Cloud & DevOps: AWS (EC2, S3, IAM, VPC, CloudTrail, WAF), Docker, Docker Compose, Linux, Git, GitHub, CI/CD

Backend & Tools: RESTful APIs, PostgreSQL, pgxpool, FastAPI, Node.js, Express, Postman, XAMPP, VS Code

AI & Security: FinBERT, Google Gemini API, Prompt Engineering, LLM Workflows, Wireshark, Kali Linux, DVWA

CS Fundamentals: Data Structures & Algorithms, OOP, OS, Computer Networks, DBMS, Cryptography

WORK EXPERIENCE

Backend Engineering Intern — Golang | Auth Service Project | Mar 2026 – Apr 2026 | Remote

Go (Golang), PostgreSQL, REST API, Postman, Linux, Git, Docker

- Engineered a production-ready RESTful authentication service in Go with token generation, refresh-token rotation, and secure logout — eliminating 100% of manual auth overhead.
- Architected PostgreSQL relational schema with pgxpool connection pooling and middleware-chained permission enforcement across all API endpoints — improving query throughput by 40%.
- Delivered fully documented REST API with structured JSON error handling, bcrypt password hashing, .env-based secret management, and a Postman collection covering 12+ endpoints.

PROJECTS

5-Layer Dockerized Cybersecurity Honeypot | github.com/anmoltyagi18 | Python, Docker Compose, Flask, Wireshark, Networking

- Engineered a 5-layer honeypot system orchestrated via Docker Compose — decoy service layer (SSH/HTTP), traffic interception layer, Python fake database layer, payload logger, and a real-time threat-analysis dashboard, each isolated in its own container.
- Built a Python fake database that simulates realistic SQL responses to attackers while silently logging all queries, credentials, and injection attempts — enabling full attacker behavioral profiling.

AI Trading Copilot | github.com/anmoltyagi18/aitradingbot | FastAPI, Supabase, React/Vite, FinBERT, VectorBT, Razorpay

- Built a behavioral AI trading platform for Indian retail investors detecting panic-selling, FOMO, and revenge trading using FinBERT sentiment analysis and VectorBT-powered strategy backtesting.
- Delivered full-stack system with FastAPI backend, Supabase DB, React/Vite frontend, WhatsApp Cloud API alerts, and Razorpay subscription billing on a 100% open-source stack.

DARWINAI — Open Source AI Platform | github.com/anmoltyagi18 | Next.js, Node.js, Express, Python AI Layer, Vercel, Render, Railway

- Architected a full-stack AI platform with React/Next.js frontend, Node.js/Express API, and a Python AI inference layer — deployed across Vercel, Render, and Railway for independent scaling.
- Integrated LLM workflows and REST APIs for intelligent, context-aware features; designed multi-service architecture enabling zero-downtime deployments across all application layers.

EDUCATION

ABES Engineering College (ABESEC), Ghaziabad | Jul 2024 – May 2028 | B.Tech, CSE | AKTU-affiliated | NAAC A-Grade | 3rd Year

Coursework: DSA, OOP (Java & Python), Computer Networks, DBMS, Cybersecurity, OS

CBSE Board — 12th Standard | Science (PCM) | 2024 | Score: 90%

CERTIFICATIONS

Postman API Student Expert (Feb 2026) • **AWS Cloud Practitioner Essentials** (Jan 2026) • Python Bootcamp — GeeksforGeeks (Aug 2025)

• AI for Beginners — HP (Jul 2025) • SQL Basic — HackerRank (Aug 2025) • GenAI in Data Analytics — Meta (May 2025)

AWARDS & ACHIEVEMENTS

Open Source Contributor — 3 Merged PRs (Catrobat/Catroweb, Jenkins, Kiwix) • 7 Hackathons — Finals in Multiple Inter-college Events • 1,200+ LinkedIn Followers — Active Tech Content Creator
